ProtoShield

Prepare board level shield prototypes in minutes with ProtoShield formable sheets.

Build Your Own Board Level Shield Prototypes

Since ***ProtoShield*** sheets are depth-etched with a checkerboard pattern, they can be easily folded into many diverse configurations. Fully functional shields can be created in minutes in the product development stage with just a pair of scissors and a straight edge for folding saving both time and money.

ProtoShield sheets are offered in two sizes. The Standard version has .25" squares and a Metric version 5mm squares. Both versions are solderable and corrosion resistant due to nickel silver material. No finishing or plating is necessary.

ProtoShield prototypes can be direct soldered to the board or shield clips can be used for easy mounting.

ProtoShield - the first step in the design process.
Once the design has been finalized, Tech-Etch offers many options for production of your shield. The photoetching process allows the fabrication of parts with complex shapes and features that are impossible to duplicate by other methods without expensive tooling.

In addition to custom designs, Tech-Etch offers standard one and two-piece shields that save design and production time, plus incur no tooling charges.

Standard Version
- .010" Thk Nickel Silver
- CDA770 Alloy
- 1/2 Hard Temper
- Overall Size: 5.5" square
- Grid Size: .25" increments

Metric Version
- .254mm (.010") Thk Nickel Silver
- CDA770 Alloy
- 1/2 Hard Temper
- Overall Size: 125mm square
- Grid Size: 5mm increments

Free Sample Sheets
Free samples of ***ProtoShield*** sheets are available from stock for immediate delivery.
