LONG FLEX CIRCUITS

Built for Aerospace & Defense

RoHS COMPLIANT

Tech Etch long flex circuits support lengths up to 60 inches for space-constrained aerospace and defense systems requiring ultra-thin, lightweight interconnects. Validated through Laser Direct Imaging, precision etch, and plating, these constructions enable fine line/space geometries, ultra-thin core materials, and 9 µm metal layers with accurate layer-to-layer alignment. Designed for avionics, satellite, radar, and secure communications applications, they deliver reliable electrical performance and mechanical durability in vibration, shock, and dynamic flex environments.

AEROSPACE & DEFENSE APPLICATIONS ★ MISSION CRITICAL RELIABILITY

AEROSPACE & AIRCRAFT

- Lightweight flex alternatives for wing/ fuselage wiring
- Signal routing across curved radar domes and panels

MISSILE & UAV SYSTEMS

- Long flex in cylindrical guidance/control electronics
- Compact, rugged signal pathways in heat/vibration zones

WEARABLES & EXO-SUITS

- Body-worn sensor networks for health, communication, and tracking
- Flexible interconnects across exo-suit joints and armor systems

NAVAL & SUBMARINE

- Sealed sonar and health-monitoring systems under harsh conditions
- Long flex routes in torpedoes and underwater drones

WHY TECH ETCH LONG FLEX CIRCUITS?

Durable in high-vibration environments	Weight-saving alternative to wire harnesses	Flexible routing in tight multi-axis assemblies	AS 9100 & ISO 9001 registered

ATTRIBUTE	PREFERRED	ADVANCED
Lead Width (min)	0.003"	0.002"
Lead Spacing (min)	0.003"	0.002"
Flex Length (max)	40"	60"
