Product Information

Steve's Garrett AT & ACE Series Two-Piece Carbon-Fiber Shaft – Adjustable Cam Lock, Multiple Colors

Upgrade Your Garrett with Lightweight Carbon Fiber and Easier Shaft Adjustments!

Give your Garrett metal detector a premium upgrade with **Steve's Detector Rods Two-Piece Carbon-Fiber**

Shaft Assembly.

Designed for compatible Garrett AT- and ACE-series detectors, this replacement assembly includes carbon-fiber middle and lower shaft sections that connect using a heavy-duty adjustable cam lock.

Unlike the factory push-button adjustment system, Steve's cam lock lets you adjust your lower rod to virtually any position within its usable range.

The result is a lightweight, attractive shaft upgrade that makes adjustments quicker and helps provide a secure connection between the shaft sections.

IMPORTANT: This product includes the middle and lower carbon-fiber shaft sections only. Your original Garrett upper S-shaft is required and is not included.

Key Features & Benefits

- **Premium 3K Carbon Fiber:** Lightweight carbon-fiber tubing with an attractive glossy twill-weave finish.
- **Two-Piece Replacement Assembly:** Includes both the middle and lower shaft sections.
- **Heavy-Duty Adjustable Cam Lock:** Securely connects the carbon-fiber shaft sections.
- **Virtually Unlimited Length Adjustment:** Position the lower rod anywhere within its usable adjustment range instead of relying on fixed spring-button holes.
- **No Lower-Rod Push Button Required:** The cam-lock design eliminates the need for the traditional lower spring-button adjustment system.
- **Lighter Than Factory Shaft Sections:** Designed to reduce weight compared with the original Garrett middle and lower shaft components.
- **Retains Your Factory Upper S-Shaft:** Connects using the original Garrett upper twist-lock cam assembly.

- **Multiple Color Options:** Customize your detector with your preferred carbon-fiber finish.
- **Convenient Lower-Rod Removal:** The cam lock makes lower-shaft removal and installation easier.

Why Upgrade Your Garrett Shaft?

Easier Adjustments Without Push Buttons

One of the biggest advantages of Steve's carbon-fiber shaft is its adjustable clamping cam lock.

Traditional Garrett shaft adjustments require lining up a spring-loaded button with predetermined adjustment holes.

Steve's design eliminates the push-button system between the middle and lower shaft sections.

Simply release the cam lock, adjust the lower rod to your preferred position, and secure the clamp.

This allows more precise adjustments for your height and detecting style.

Lightweight Carbon-Fiber Construction

Steve's uses premium carbon-fiber tubing and engineering-grade components to create a lighter alternative to the factory middle and lower shaft sections.

The glossy carbon-fiber finish also gives your detector a custom appearance.

Keep Your Original Garrett Upper Shaft

There's no need to replace the entire detector shaft assembly.

Steve's two-piece system attaches to your existing Garrett upper S-shaft using the original twist-lock cam assembly.

This makes it an affordable way to upgrade the lower portion of your detector.

Great for Coin, Relic & Jewelry Hunting

Whether you're searching old homesteads, hunting Civil War relics, exploring farm fields, or recovering lost jewelry, a stable and conveniently adjustable detector shaft makes your equipment easier to use.

Compatibility

Designed for Garrett AT-series and compatible ACE-series detectors using the appropriate factory upper S-shaft.

Examples include:

- Garrett AT Pro
- Garrett AT Gold
- Garrett AT MAX
- Compatible Garrett ACE-series detectors

Compatibility note: Garrett has used different shaft configurations across its detector lineup. Confirm that your detector uses the appropriate upper S-shaft and twist-lock connection before ordering. Compatibility with every ACE model, the ACE Apex, and newer shaft designs is not guaranteed.

Product Specifications

Specification	Details
Manufacturer	Steve's Detector Rods
Product	Garrett AT/ACE Two-Piece Carbon-Fiber Shaft
Middle Shaft Length	19¾ inches
Lower Shaft Length	20 inches

Happy happy happy

Purchased a new yellow and gold steves AT Gold 2 piece carbon fiber shaft from high plains and its fantastic. Lighter in weight. Feels comfortable and durable. The price is awesome. Totally pleased thank you.

Cool Factor

The carbon-fiber shafts (1 green, 1 black) don't lighten the AT Pro very much, but they do have a high cool factor. They're for my wife. She likes them—that's all that matters.
